programming skills

Programming languages: Java, JavaScript, JavaFX, C, C#, C++, HTML, XML.

databases: MySQL, Firebase, Qualli Life.

Tools & Frameworks: React, React-Native, Node.js, Docker, Expo, Unity, Shopify.

MS Office: Excel, Word, PowerPoint.

Languages

Arabic: Native language
German: C1
English: B1

Profile

A dedicated and tech-savvy computer scientist with practical experience as an IT administrator and project manager in software development. I have a solid foundation in software development, networking, and IT support, as well as initial experience gained through internships at the MediaLab at the University of Wuppertal. I am currently a master's student in information technology with a particular interest in web applications and artificial intelligence, and I am motivated to develop innovative solutions as part of a team.

work experience

internship

MediaLab
10.2024 - 12.2024

IT-Administrator

Arbeit Remscheid
10.2025

Training in Qualli Life
Data protection training

Software Development Project Manager

Projects:
Exam management app: makes it easier and more efficient for students to manage their exam and grade overviews.
Financial management app: helps students to better organize, monitor, and plan their everyday finances.

Internet store: includes an intelligent messaging system to inform employees about stock levels and order status, a discount system, a delivery system, and much more.
3D representation of buildings: display buildings, streets, and mountains in 3D in Google Earth.
2D chess game: first experiences with game development.

References

Create a whiteboard in a game and work with Mirror:

- Development of a network-compatible whiteboard with mirror in Unity
- Real-time synchronization of drawings and media content
- Functions: image/video display, PDF upload & download
- Simple UI with file selection and synchronized display
- Promotion of cooperative learning in the digital classroom

Animate two animals and give them movements in Unity:

- Digitization of a real quail via 3D scan, post-processing in Blender (model cleanup, texturing, animation)
- Integration of an animated frog model via Mixamo
- Implementation of both models in Unity with Animator Controller and C# scripts
- Keyboard control, including realistic movements and physical interactions (collision, animation triggers)

Create a website where students can learn how to bring a dead animal back to life (from real to digital):

- Development of a barrier-free learning platform using HTML, CSS, and JavaScript
- Step-by-step explanation of the process: from animal research to game integration
- Integration of images, videos, and a Unity WebGL project for illustration purposes
- Focus on pedagogical preparation for digital education
- Result: Multimedia website for teaching 3D design and game integration to students

Exam administration app – support for professors and the examination office:

- Development of an application for teachers to record, maintain, and share grades
- Functions: Grade entry, participant overview, export to the examination office, status display
- Focus on user-friendliness, data security, and efficient operation for large courses
- Technologies: HTML, CSS, JavaFX, MySQL, possibly Docker-supported backend
- Result: Digital solution for structured exam management and optimized communication with the examination office

Financial management app – Cross-platform financial planning solution for students:

- UI/UX design with Figma, implementation with React, React Native & Expo
- Mobile app distribution and testing via Expo
- Backend with Firebase (Firestore, Authentication) and Node.js for server-side logic
- Features:
- Revenue/expense management & budgeting
- Interactive monthly overview with charts
- Budget alerts & expense categorization
- Separate savings page for target amounts
- Goal: Promoting financial self-control during studies
- Result: Modern, platform-independent app for mobile financial planning

References

online store:

- Creation of a user-friendly and secure shopping environment
- Integration of common payment methods (credit card, PayPal, bank transfer)
- Implementation of a discount and voucher system for special promotions
- Management of product catalog, orders, inventory, and shipping
- Goal: Reliable, flexible, and efficient e-commerce solution for customers

3D representation of buildings in Google Earth:

- Implementation of a project to display buildings, streets, and mountains in 3D
- Use of geodata for realistic modeling of urban and natural structures
- Goal: Create an interactive environment for planning and presentation purposes

2D Chess Game:

- Implementation of game logic, user interface, and interactive game mechanics
- Focus on the fundamentals of game design and object-oriented programming
- Goal: Gain initial practical experience in game development

Personal portfolio website (resume page):

- Design and implementation of a personal website to showcase profile, skills, and projects.
- Use of modern web technologies: HTML, CSS, JavaScript.
- Integration of project gallery, contact details, and responsive design (mobile & desktop).
- Goal: Interactive, professional overview for job applications and project presentations.

E-commerce store with Shopify (dropshipping model):

- Creation and design of a Shopify store for dropshipping products via DSers
- Setup of payment and shipping methods and checkout process
- Adaptation of store design to the target audience
- Optimization of product descriptions, images, and categories to increase conversion
- Use of marketing tools (social media, discounts) to promote sales
- Goal: Automated, user-friendly online store with minimal administrative effort

IT-Administrator:

- Configuration of IP and UP0 telephones
- Management of telephone numbers and call forwarding in telephone systems
- Installation and commissioning of IT equipment (workstation computers, laptops, printers)
- Ensuring server security and system monitoring
- Monitoring and securing server infrastructures
- Encrypting emails for secure communication
- Setting up and using email encryption
- Editing and maintaining websites
- Content maintenance and technical adjustments to websites
- Independently conducting training courses on data protection and Qualli Life
- Applying and editing QualliLife in everyday work

References

Web-based Platform for User Management and Profile Handling:

- Developed a modern web application using Next.js (React) and Tailwind CSS for the frontend with a clean, scalable component-based architecture
- Structured the frontend using a modular Next.js App Router architecture with role-based routes (admin / recruiter / vermittler / auth separation)
- Built a backend with NestJS and Prisma ORM connected to a PostgreSQL database
- Implemented authentication features including user registration, login system, and password reset with token-based logic
- Created dynamic forms with validation and real-time user feedback using success and error toast notifications
- Developed a profile management system with detailed user profile pages using dynamic routing (/profiles/[id])
- Implemented a recruiter module for browsing anonymized profiles and requesting access to user data
- Built a “Vermittler” workflow allowing forwarding of application documents to employers with status-based access control
- Integrated REST APIs for communication between frontend and backend (with frontend-first mock architecture during development phase)
- Designed and implemented profile status tracking system (e.g., “approved”, “pending”, “rejected”, “none”) with conditional UI rendering
- Developed a reusable UI system including cards, buttons, status badges, and toast notifications for consistent user experience
- Added interactive recruiter dashboard features including access request flow, profile navigation, and real-time feedback messages
- Implemented role-based access control (admin / recruiter / vermittler) with planned backend enforcement
- Used Git and GitHub for version control and collaboration (branches, pull requests)
- Document upload and automated validation
- Automated matching of requirements and user data
- Extended dashboard and admin functionalities
